

Top 10 AI & Expert Analysts for Mining Stocks

A competitive-research review of the most credible voices and tools in mining-stock analysis — gold, silver, copper, lithium, uranium and the juniors — ranked by reach, reputation and track record across social media.

A deliberate **blend**: established human analysts and creators who dominate mining social media, plus the AI/quant tools that actually cover the resource sector.

Prepared for: Competitive research | Date: May 23, 2026

Important: follower counts are approximate and change constantly; track-record and “performance” claims for newsletters and influencers are almost always self-reported and not independently audited. This is market research, not investment advice.

How to read this list

Mining is a specialist corner of the market, and it shows in who covers it. Unlike broad equities, there are very few *mining-specific* AI apps — most general AI scoring tools (Danelfin, Kavout, TrendSpider) can be pointed at miners but have no resource-sector edge. The real signal in mining lives with **domain experts**: geologists, fund managers and speculators who publish on X, YouTube and Substack and have decades of cycle experience. So this top 10 is a blend — the experts who dominate mining social media, plus the handful of AI tools that genuinely serve the sector.

Two honest caveats up front. First, “performance” in this niche is mostly self-reported — treat all track-record claims as marketing until verified. Second, mining (especially junior explorers) is among the most volatile, promotion-heavy areas of the market; the best analysts here are valued as much for skepticism and risk control as for picks.

#	Name / Tool	Type	Focus	Reach	Where to follow
1	Rick Rule	Expert	All resources	Very high	X, Rule Investment Media
2	Crescat / Tavi Costa	Expert+Fund	Gold, macro	Very high	X @TaviCosta, crescat.net
3	Jay Martin	Creator	Broad mining	Very high	YouTube, X @JayMartinBC
4	Lobo Tiggre	Expert	Juniors	High	X @duediligenceguy
5	Marin Katusa	Expert	Resources	High	YouTube, katusaresearch.com
6	Cook & Mazumdar	Expert	Explorers	Med-high	X @BrentCookGeo
7	Jordan Roy-Byrne	Expert	PM miners	High	X @TheDailyGold
8	Dave Erfle	Expert	Juniors	Medium	juniorminerjunky.com
9	Junior Mining Intel.	AI tool	Juniors data	Niche	juniorminingintelligence.com
10	Tickeron Metals Robot	AI tool	Metals/miners	Niche	tickeron.com

“Reach” is a qualitative read of social-media presence across X/YouTube/newsletter, not a precise follower count. PM = precious metals. Handles should be confirmed before following — impersonation accounts are common in this space.

#1 Rick Rule

EXPERT

The most respected name in resource investing

Link	https://ruleinvestmentmedia.com/
Follow	X (@RealRickRule), Rule Investment Media, frequent Kitco/conference guest
Focus	All resources — precious metals, energy, and broad commodities

Why they matter

Former president/CEO of Sprott US Holdings and a half-century veteran of natural-resource investing. Rule is widely treated as the dean of the sector: his framework on management quality, optionality and contrarian timing is foundational reading for serious mining investors.

Social media & reviews

Ubiquitous on mining YouTube and at conferences (his own Rule Symposium, plus Kitco and others). High trust, very high reach.

Performance & track record

Reputation built over decades of cycle-tested calls rather than a published model portfolio; widely cited for capital-preservation discipline. No single audited scorecard — his edge is judgment and pattern recognition.

Competitive take

If you read one person on mining, it is usually Rule. Best for the 'how to think about resource cycles' layer rather than discrete buy/sell signals.

#2

Crescat Capital — Tavi Costa & Quinton Hennigh

EXPERT + FUND

Macro firepower plus a world-class economic geologist

Link	https://www.crescat.net/
Follow	X (@TaviCosta — very large following), crescat.net research
Focus	Gold and precious-metals miners through a global-macro lens; activist junior positions

Why they matter

Tavi Costa's chart-driven macro threads are among the most-shared mining/gold content on X. Crescat pairs that with Dr. Quinton Hennigh, a 40-year economic geologist, giving the rare combination of top-down macro and bottom-up geological due diligence.

Social media & reviews

Costa is one of the highest-reach gold/macro voices on X; Crescat publishes detailed letters and 'Activist on Gold' updates.

Performance & track record

Crescat runs real funds, so positioning is partly disclosed — but it's a hedge fund with volatile, concentrated resource bets. Performance is reported in fund letters; results have swung hard with the gold cycle.

Competitive take

Best blend of macro narrative and geological credibility. Note the inherent conflict: they hold what they discuss.

#3 Jay Martin

CREATOR

The biggest interview platform in mining investing

Link	https://www.youtube.com/@JayMartinBC
Follow	YouTube (large channel), X (@JayMartinBC), host of VRIC (Vancouver Resource Investment Conference)
Focus	Broad mining and macro via long-form interviews with sector heavyweights

Why they matter

Martin (Cambridge House) runs one of the most-watched mining-investor YouTube channels and the flagship VRIC conference. He's a distribution hub more than a stock-picker — the place you hear nearly everyone else on this list.

Social media & reviews

Among the highest reach of any mining creator; strong production quality and consistent cadence.

Performance & track record

Not a track-record analyst — value is access, curation and macro framing. Judge by interview quality, not picks.

Competitive take

Best top-of-funnel: follow to source ideas and hear the sector's leading voices, then do independent due diligence.

#4 Lobo Tiggre (The Independent Speculator)

EXPERT

Transparency-first junior-mining speculator

Link	https://independentspeculator.com/
Follow	X (@duediligenceguy), independentspeculator.com, YouTube
Focus	Junior miners and explorers; high-risk/high-reward speculation

Why they matter

Writing previously as 'Louis James,' Tiggre built a name on disclosing his own trades and rationale. He explicitly markets transparency — publishing entries, exits and mistakes — which is rare and valued in a promotion-heavy niche.

Social media & reviews

High trust among serious juniors investors; active on X and his own video updates.

Performance & track record

Publishes his own portfolio actions, which is more accountable than most. Still self-reported; junior speculation is inherently boom/bust.

Competitive take

Best for investors who want to watch a disciplined speculator's actual moves and reasoning in the junior space.

#5 Marin Katusa (Katusa Research)

EXPERT

Resource financier with a big retail following

Link	https://katusaresearch.com/
Follow	YouTube, X, katusaresearch.com newsletters and books
Focus	Resources broadly — metals, energy, uranium; financings and 'alligator' deal structures

Why they matter

Katusa is a well-known resource financier and best-selling author with a large retail audience. He emphasizes how deals and financings actually work — useful context retail investors rarely get.

Social media & reviews

High reach across YouTube and email; polished, prolific output.

Performance & track record

Promotional in style; some picks tied to financings he participates in. Self-reported results — weigh the conflicts and verify independently.

Competitive take

Strong on deal mechanics and capital flows. Read with awareness of the marketing layer.

#6 Brent Cook & Joe Mazumdar (Exploration Insights)

EXPERT

Geologist-grade due diligence on explorers

Link	https://explorationinsights.com/
Follow	X (@BrentCookGeo), explorationinsights.com newsletter
Focus	Exploration and development-stage miners — drill results, resource quality, valuation

Why they matter

Both are economic geologists; their newsletter ('Turning Rocks Into Money') is prized for technical rigor — reading drill results and killing bad stories before they cost money. Skepticism is the product.

Social media & reviews

Smaller but highly respected, expert audience; frequent Kitco guests.

Performance & track record

Subscription newsletter with a long reputation for discipline; results self-reported but the brand is built on saying 'no.'

Competitive take

Best for technical due diligence on explorers. The antidote to hype — lower reach, higher signal.

#7 Jordan Roy-Byrne (The Daily Gold)

EXPERT

Technical analysis of precious-metals miners

Link	https://thedailygold.com/
Follow	X (@TheDailyGold), thedailygold.com, YouTube
Focus	Gold and silver miners through technical/charting and cycle analysis

Why they matter

A go-to for chart-based timing on the precious-metals complex — trends, breakouts and relative strength across GDX/GDXJ and individual miners. Author of a book on the gold-stock bull case.

Social media & reviews

Strong, consistent X presence in the PM-charting community.

Performance & track record

Technical calls are public and time-stamped on his feed/site — more checkable than most, though still selectively presented.

Competitive take

Best for timing and chart structure on precious-metals miners; pair with a fundamentals source.

#8 Dave Erfle (Junior Miner Junky)

EXPERT

Full-time junior precious-metals specialist

Link	https://juniorminerjunky.com/
Follow	juniorminerjunky.com newsletter, X, frequent Kitco/Palisades guest
Focus	Junior gold and silver miners; portfolio newsletter

Why they matter

Erfle invests in juniors full-time and runs a focused subscriber portfolio. Two-decades-plus of sector experience and a steady conference/podcast presence make him a reliable junior-PM voice.

Social media & reviews

Solid, engaged niche following; regular long-form interviews.

Performance & track record

Runs a model portfolio for subscribers; self-reported. Junior PM exposure is high-beta to the gold cycle.

Competitive take

Best for a dedicated junior-precious-metals portfolio perspective. Verify the handle — confirm via his site to avoid impersonators.

#9 Junior Mining Intelligence

AI / DATA TOOL

AI-assisted screening built for the juniors

Link	https://juniorminingintelligence.com/
Follow	Web platform (subscription)
Focus	500+ junior miners — projects, resource estimates, financing history, drill-result scanning

Why they matter

One of the few tools purpose-built for mining rather than general equities. Profiles consolidate projects, resources and financings; screeners/calculators rank by ore grade, compare peers side-by-side and scan drill results — work that's painfully manual otherwise.

Social media & reviews

Niche, tool-specific audience; not a social-media presence.

Performance & track record

A data/screening utility, not a pick service — 'performance' is about data coverage and time saved, not returns.

Competitive take

Best AI/data layer for doing your own junior-mining due diligence at scale. Complements the human analysts above.

#1
0

Tickeron — Mining & Metals AI Robot

AI TOOL

Automated pattern signals on metals & miners

Link	https://tickeron.com/
Follow	Web platform (subscription); free tier available
Focus	AI pattern recognition and trade signals for mining/metals tickers and ETFs

Why they matter

Tickeron's sector-specific 'AI Robots' scan charts for breakout/classic patterns and attach a probability-of-success score; the company markets a dedicated mining-and-metals robot. It's the closest a mainstream AI app gets to a mining-tuned signal product.

Social media & reviews

Mainstream fintech reach but not a mining-community voice; promotional performance posts.

Performance & track record

Headline annualized-return figures are vendor-marketing and unaudited — discount heavily and paper-test first.

Competitive take

Best for traders who want automated technical signals on liquid miners/ETFs. Treat performance claims with strong skepticism.

Honorable mentions

Jordan Rusche (Mining Stock Monkey) — a fast-growing YouTube/Substack creator (X @miningstockguy) covering gold, silver, copper and uranium; newer but rising. **Bill Powers (Mining Stock Education)** — long-running interview channel and podcast. **Peter Schiff** — huge reach on gold as a macro/monetary thesis, though more gold-price advocate than miner stock-picker. **Kitco News (@KitcoNewsNOW)** — the sector's leading news/interview feed. **Incite AI** — a general AI tool marketing gold-market analysis. **General AI scorers (Danelfin, Kavout, TrendSpider)** from the broader-market list can be pointed at large-cap miners, but have no resource-sector edge.

Competitive takeaways

- 1. Mining is an expert-led niche, not an AI-led one.** The credible 'analysts' here are overwhelmingly humans with geological or financing backgrounds. Purpose-built mining AI is thin — mostly data/screening (Junior Mining Intelligence) or generic pattern bots (Tickeron). That gap is the opportunity.
- 2. Distribution lives on YouTube and X.** Jay Martin, Crescat/Costa and Rick Rule set the agenda; almost every other voice appears on their platforms. Reach and credibility are concentrated.
- 3. Conflicts are the norm.** Many of the highest-reach voices hold or finance what they discuss (Crescat, Katusa) or run subscriber portfolios. The most trusted differentiate on transparency (Tiggre) or skepticism (Cook & Mazumdar).
- 4. The white space.** An explainable, mining-tuned AI that ingested drill results, resource estimates, financings and management history — with an audited, transparent track record — would have no real competitor today. The human experts supply the judgment; no tool yet packages it.

Disclaimer: Competitive-market research, not investment advice. Mining and junior-resource stocks are highly volatile and promotion-prone. Follower counts are approximate; track-record/performance claims are self-reported and unaudited unless stated otherwise. Verify social handles directly on each person's official site — impersonation is common. Confirm current pricing and details before subscribing.
